ASHRAE Hellenic Chapter will host the thematic **TESSE²B** conference in the field of energy storage targeted to Energy Efficient Buildings.

This thematic event will present and discuss current innovation in the Energy Storage field targeted to Energy Efficiency & Built Environment, focusing on integrated solutions for residential building energy storage by solar and geothermal resources. Participants actively related to heating and cooling industry, industrial and commercial suppliers, Renewable Energy professionals, teaching and training experts, engineering chambers, decision makers as well as participants from research and development in the EU, are welcome to attend and benefit from this unique opportunity to partner with the **TESSE²B** consortium.

TESSE²B project has received funding from the European Union's Horizon 2020 Research and Innovation Programme, under the Grant Agreement number 680555
